

UL's Energy Verified Mark

Please keep the following points in mind when using UL's Energy Verified Mark:

- The words "Energy Verified" must be located immediately adjacent to the leaf element of the Mark (left, right, above or below) with nothing in between. The bar is optional and can be removed from the Mark artwork if necessary for spacing or legibility.
- Please do not re-create the Mark; use only authorized artwork provided by UL Solutions.
- The minimum height of the trademark symbol (™) shall be 1/32 of an inch.
- When the overall height of the Mark is less than 9/16 of an inch, the trademark symbol may be omitted if it is not legible to the naked eye.
- There is no minimum size defined for the Energy Verified Mark. However, the Mark must be large enough so that the leaf element and the words "Energy Verified" are always legible.
- The words "Energy Verified" are considered an identifier to the trademarked leaf Mark. If it is determined that the identifier "Energy Verified" is needed in a different language the translation of the words "Energy Verified" is the responsibility of the party placing the Mark on the product. If an additional language is used both English and the new language must be placed together as identified above.
- The Mark can be displayed in black on a light background or white on a dark background. If you would like to display the Mark in an alternate color, please use only PMS 369 or its CMYK/RGB equivalents. Alternatively, the Mark may be directly and permanently applied to the product by stamping, molding, ink-stamping, silk screening or similar process.
- Once you've earned the Mark, you can use it in your advertising and promotional activities. Please refer to <http://www.ul.com/marketing> for additional guidance.
